The Microscope

Quarterly Newsletter highlighting the Department of Microbiology at NYU Langone

February 2026

Electron micrograph showing wild-type influenza A virus budding from A549 cells after 10 hours of infection. Submitted by Ryla Cantergiani (tenOever lab)

New Year, New-sletter

Happy New Year!

We're back with the third edition of our quarterly newsletter—now with a new name, thanks to your votes: **The Microscope!**

Inspired by this new name, we'll feature striking research imagery

Share an Update

Submit an Image

from around the department in the main banner of each newsletter.

Kicking off this new initiative is a submission from Ryla Cantergiani, a 4th year graduate student in the tenOever lab. The electron micrograph above shows wild-type influenza A virus budding from A549 cells after 10 hours of infection. The image was captured in the Microscopy Core by Jason "Jay" Yin, Electron Microscopy Specialist, with experimental planning support from Dr. Alice Liang, Director.

Do you have research images that are newsletter-worthy? Don't wait to be asked...click the "Submit an Image" button anytime to share for an upcoming newsletter. Please include a brief description and image credit, and confirm that images are approved for public sharing.

And if you didn't get to share your good news this round, just click the button and "Share an Update" with your Content Ambassador for inclusion in the next issue!

Here's to a strong start to the year!

A Note from the Chair

In times like these, when politics and policy can pull at shared values and fracture communities, strengthening our internal fabric is one of the most practical responses we have. That is why I value this newsletter so much, and why I am grateful to our newsletter editors,

Judy and Emily. Thank you both for keeping us connected and well-informed.

In addition to the community updates in this issue, I am also pleased to share an effort that I hope will further strengthen that fabric. In the months ahead, we will begin consolidating most of the Department of Microbiology onto the fourth and fifth floors of ACLS-W. Moves are rarely effortless, but proximity has real value. Working closer together makes it easier to exchange ideas in real time, share expertise across groups, and should help foster more collaborations from forming. The goal is not simply a more efficient footprint, it is a more connected community where the science benefits from the relationships around it.

For these reasons, I am excited to see us fully populate the fourth and fifth floors, and to finally have dedicated social spaces, a seminar room, and new equipment to further enable our work. Beyond added flexibility for events and visitors, I believe these shared resources will strengthen our seminar culture, our training environment, and our day-to-day sense of belonging.

Upcoming Seminars

RECURRING MEETINGS

Departmental Seminar Series

Fridays at 11:30 AM
Science Building
Room 103

Departmental Seminar Series Calendar

Virology Consortium Meeting

11:30 AM - 12:30 PM
Every other Tuesday
ACLS West 5th Floor
Conference Room 508

Conferences

Microbes in Microbiomes 2026

February 18 - 20, 2026: Miami, FL
The inaugural Microbes in Microbiomes conference will showcase advances in microbiome science, from structure to function, with a focus on the individual microbes driving key traits. Topics span human, animal, plant, and environmental health, with an emphasis on species-level insights and their interactions within complex communities.

Viruses 2026—New Horizons in Virology

March 11 - 13, 2026: Barcelona, Spain
Organized by MDPI and the open-access journal *Viruses*, this meeting unites the global virolgy community to exchange ideas, discoveries and collaborations.

Six key sessions include: General Topics in Virology; Antiviral Therapeutics, Vaccines, and Host Defenses; Antiviral Innate Immunity; Structure and Mechanisms of Virus Replication; Virus-Host Interactions; and Viral Pathogenesis and Evolution.

Annual Meeting of the Society of Virology

March 17 - 20, 2026: Heidelberg, Germany
The 35th Annual Meeting of the Society of Virology (GfV) will be held in the Chemistry Lecture Center on the Life Science Campus of Heidelberg University in Heidelberg, Germany.

Immunology 2026

April 15 - 19, 2026: Boston, MA
109th annual meeting of the American Association of Immunologists (AAI) held at the Thomas M. Menino Convention & Exhibition Center (MCEC) in Boston, MA.

Southeastern Regional Virology Conference (SERVC)

April 24 - 26, 2026: Atlanta, GA
The SERVC meets every two years at Emory University. This 18th meeting will take place at the Emory Hotel and Conference Center in

ASGCT 2026

May 11 - 15, 2026: Boston, MA
29th annual meeting of the American Society of Gene and Cell Therapy (ASGCT), held at the Thomas M. Menino Convention & Exhibition Center (MCEC) in Boston, MA.

Atlanta, GA.

Abstract Submission Deadline: February 16th

ASM Microbe 2026

June 4 - 7, 2025: Washington, DC
Annual meeting of the American Society for Microbiology with a new format that brings together the full breadth of microbiology through 3 distinct, yet interconnected meetings, all under one roof:

• ASM Health
• ASM Applied & Environmental Microbiology
• ASM Mechanism Discovery

FOCIS 2026

June 9 - 12, 2026: San Francisco, CA
26th Annual Meeting of the Federation of Clinical Immunology Societies, held at the San Francisco Marriott Marquis in San Francisco, CA.

Keystone Symposia: Viral Pathogenesis and Immunity: From Molecular Discoveries to Therapeutics

June 15 - 18, 2026: Hannover, Germany
This Keystone Symposia conference brings together scientists from academia, industry, and government to explore viral infection, antiviral immunity, and the development of countermeasures, with a focus on viral immunology, pathogenesis, evolution, prevention, and treatment. The meeting will be held at Herrenhausen Palace in Hannover, Germany.

Short Talk Abstract Deadline: February 11, 2026
Poster Abstract Deadline: May 25, 2026

GRC 2026: Microbial Toxins and Pathogenicity

July 12 - 17, 2026: Waterville Valley, NH
The 2026 Gordon Research Conference (GRC) on Microbial Toxins and Pathogenicity and its companion Gordon Research Seminar (GRS) will feature research on the fundamental mechanisms of host-microbe/toxin interactions and bacterial pathogenesis.

Invited Keynote Speaker: Heran Darwin

International Herpesvirus Workshop

July 11 - 15, 2026: Montreal, CA
The 50th International Herpesvirus Workshop will take place at the Centre Mont-Royal, a modern conference venue located in the heart of downtown Montreal. Sessions will cover all aspects of herpesvirus research, from molecular biology, latency, immunity, and pathogenesis, to clinical and translational advances in prevention and therapy.

ASV 2026

July 27 - 30, 2026: Minneapolis, MN
45th annual meeting of the American Society for Virology, hosted by the University of Minnesota in Minneapolis, MN.

Travel Award Deadline: February 9th

Options XIII Conference for the Control of Influenza

August 30 - September 2, 2026: Washington, DC
The 2026 meeting is being planned by four Scientific Track Committees: Clinical Science, Public Health, Virology & Pathogenesis, and Implementation. It will be held at the Washington DC Convention Center in Washington, DC.

Abstract Submission Deadline: April 10th

This meeting will be preceded by the International Society for Respiratory Viruses (ISRV) Mini-School of Respiratory Viruses on Saturday, August 29th.

Rocky Mountain Virology Conference (RMVC)

September 25 - 27, 2026: Pingree Park, CO
The RMVC is held each fall. This year's meeting will be held at the Colorado State University Mountain Campus in Pingree Park, CO.

IUMS Biennial Congress 2026

November 4 - 6, 2026: Lisbon, Portugal
The International Union of Microbiological Societies (IUMS) Biennial Congress unites all the main three disciplines of microbiology—Bacteriology and Applied Microbiology, Virology, and Mycology and Eukaryotic Microbiology—in one place. The 2026 Meeting will focus on "Beyond the Microscope: AI & Innovation in Microbiology."

Abstract Submission Deadline: April 29th

ASTMH 2026

November 18 - 22, 2026: National Harbor, MD
The American Society of Tropical Medicine and Hygiene (ASTMH) annual meeting will be held at the Gaylord National Harbor, MD (adjacent to Washington, DC).

Symposia Submission Deadline: March 4th
Abstract Submission Deadline: April 1st

Department Updates

New Initiatives

Departmental Wiki

The Departmental Wiki is officially underway, with a request submitted to MCIT to create the space. Over the coming months, we will develop a centralized departmental landing page that individual labs can link to from their own Wiki pages. The Wiki will serve as a shared hub for essential information, including faculty bios; course and curriculum details; information about shared facilities and core resources; lab safety and onboarding guides; meeting and seminar schedules; and other tools to support research, education, and collaboration across the department.

Equipment and Facilities

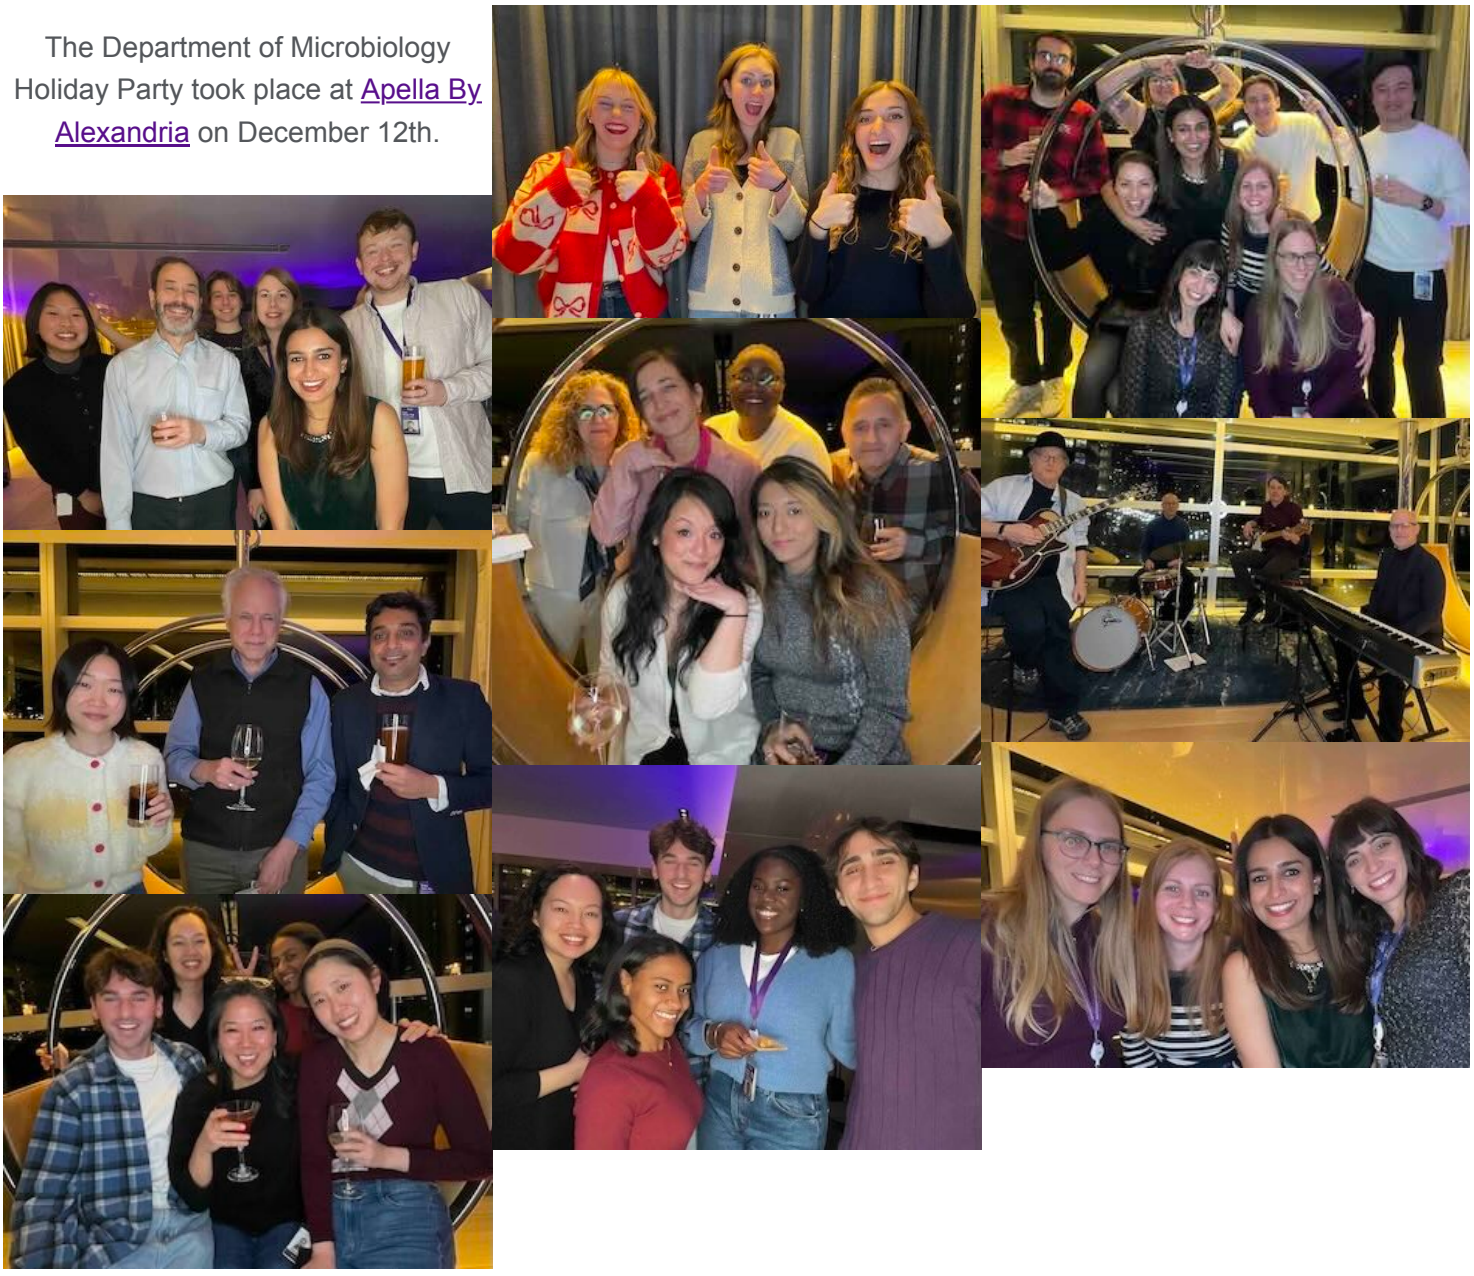

The Department has new equipment!

In preparation for moving more labs to the fourth floor, we are in the process of receiving new equipment that will be housed on the 4th floor:

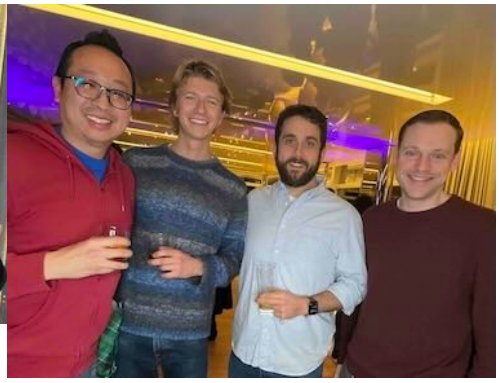

- Zentrimix Dual centrifuge
- QX700 E Droplet Digital PCR System
- Vi-CELL BLU cell viability analyzer

Fun Around the Holidays

The Department of Microbiology Holiday Party took place at Apella By Alexandria on December 12th.

The Ortigoza and Stapleford labs held a joint holiday party and made some virus and holiday themed ornaments.

Spotlight on Success

PI News

Kamal Khanna, PhD

In addition to being promoted to full professor, Kamal Khanna, PhD was also named Co-Director of the Translational Immunology Center (TrIC), along with Stefan Feske, MD (Dept of Pathology) and Amanda Lund, PhD (Depts of Dermatology and Pathology).

Since its establishment in 2020, TrIC has advanced basic and translational immunology research at NYU Langone by fostering collaboration across the institution and creating a shared computational immunology resource to support cutting-edge omics and analytics. Under the leadership of Drs Khanna, Feske and Lund, the TrIC will expand these efforts by deepening cross-disciplinary collaborations and accelerating the translation of experimental immunology into meaningful clinical impact.

Congratulations!

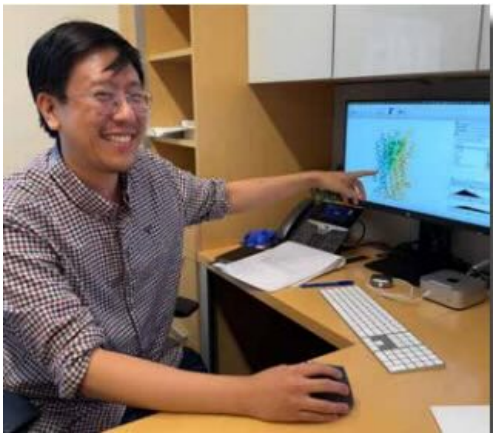

Mila Ortigoza, PhD

Congratulations to Mila Ortigoza, MD, PhD on receiving the Saul J. Farber Assistant Professor of Medicine distinction for excellence in medicine, recognized at the Dean's Honors Day Celebration in October.

Dr Saul J. Farber served as Dean of the NYU School of Medicine from 1963-1966. A leader in internal medical and renal physiology, Dr. Farber also served as the president of the American College of Physicians, chaired the American Board of Internal Medicine and The New York Academy of Medicine, and helped author the New York Heart Association's classification of the various stages of heart failure.

James Lee, PhD

Congratulations to James Lee, who was featured in the 2025 Winter Edition of the Vilcek Messenger, published in December.

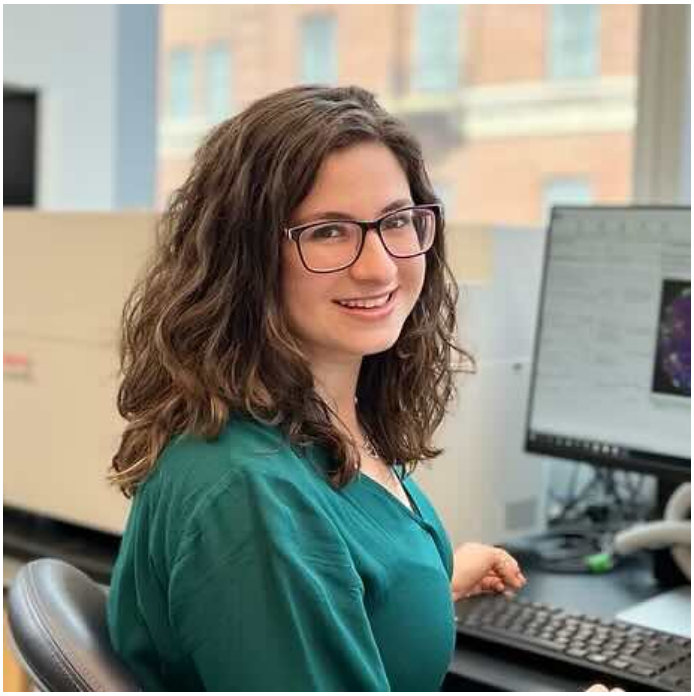

Building with Rigor and Wonder:
Lee Lab Launches at NYU.
James Lee's office at NYU's Department of Microbiology carries the unmistakable energy of new beginnings, boxes still scattered, whiteboards already dense with molecular diagrams and experimental designs.
It's here, in this space between settling in and launching forward, that Lee reflects on a path that began with relentless questioning and led him to the forefront of understanding host-pathogen interactions...

Read the full story here.

Trainee News

Grace Ciabattoni

Adam Silhavy

Two Ph.D. candidates in the department, Grace Ciabattoni (Ortigoza lab) and Adam Silhavy (Mohr/Wilson group), got the opportunity to present at the Inaugural Work-in-Progress Symposium on December 9, 2025. The symposium showcased the exceptional work of eight Vilcek graduate students, each chosen by their peers across the various concentrations of the program.

Grace Ciabattoni
Title: "Accessory Proteins: Hidden Drivers of SARS-CoV-2 Transmission"
Mentor: Mila Ortigoza, MD, PhD

Adam Silhavy
Title: "Investigating Cytomegalovirus Refashioning of mRNA Spatial Organization and Localized Translation"
Mentors: Ian Mohr, PhD, and Angus Wilson, PhD

Nicole Rondeau

Congratulations to Nicole Rondeau, a graduate student in the Stapleford lab, who received the award for "Outstanding Engagement and Participation in the Biomedicine Across Scales: Works-in-Progress" at the Inaugural Work-in-Progress Symposium on December 9, 2025.

Publications & Presentations

Belasco Lab

Landau Lab

5'-terminal glycosylation of protein-coding transcripts: An epitranscriptomic modification that prolongs mRNA lifetimes. Banerjee et al. **PNAS.**

Congratulations to Tithi Banerjee, whose paper was chosen for a commentary in PNAS.

H. Darwin Lab

Cell envelope maintenance by PhoP is essential for Mycobacterium tuberculosis methylglyoxal resistance. Tran et al. **PNAS.**

Khanna Lab

Peritumoral macrophages recruit eosinophils to promote antitumor immune responses in breast cancer. Saglimbeni et al. **PNAS.**

Chimeric antigen receptor dendritic cells suppress melanoma growth in preclinical cancer models. Minnee et al. **Journal for ImmunoTherapy of Cancer.**

Mohr/Wilson Group

TDP-43 promotes efficient HSV-1 replication in human DRG-derived neurons. Braspenning et al. **Journal of Virology.**

Ratner Lab

Expansion of the Group B Streptococcus serotype repertoire via gene acquisition from other streptococcal species. Sharp et al. **Microbiology Spectrum.**

New Faces

Kevim Bordignon Guterres

Kevim Guterres is a third year graduate student from the São Paulo University in Brazil, who will be visiting for the year in the H. Darwin lab.

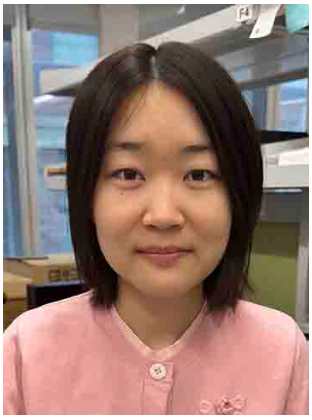

Peter Walsh, PhD

Dr. Peter Walsh is a new postdoc in the Mohr/Wilson group studying the spatiotemporal regulation of translation and mRNA fate decisions using combined wet-lab and computational approaches. He completed his PhD at the Cancer Research UK (CRUK) Scotland Institute and went on to serve as a Senior Scientific Officer.

Peter says, "I look forward to meeting colleagues across the department and engaging in productive scientific discussions and collaborations!"

Mingqian Wang, PhD

Dr. Mingqian Wang is a new postdoctoral fellow in the Belasco Lab. Mingqian recently received her PhD in chemistry from Stony Brook University.

Fond Farewells

Alvaro Fajardo, PhD

Dr. Alvaro Fajardo, a postdoc in the tenOever lab, moved back to Uruguay. He's now an Assistant Professor at Universidad de la Republica (Udelar) in Uruguay.

Nora Herzog, PhD

Congratulations to Dr. Nora Herzog, a graduate student in the Mohr/Wilson group, who successfully defended their thesis on September 17th.

Thesis Title: "ICP4 Alters Nuclear Biophysical Properties During Herpes Simplex Virus 1 Infection, Leading to Increased Fluidization and Enabling Condensate Formation"

Training Program: Cell Biology and Microbiology

Nora has now begun a postdoc in Dr. Rafael Sanjuán's lab at the University of Valencia in Valencia, Spain.

Zeineb Mhamdi, PhD

Zeineb Mhamdi, a postdoc in the Ortigoza lab, has departed NYU for a new postdoctoral opportunity in the lab of Pinghui Feng, at the University of Southern California. We wish her the best of luck!

Rebecca Plessel, PhD

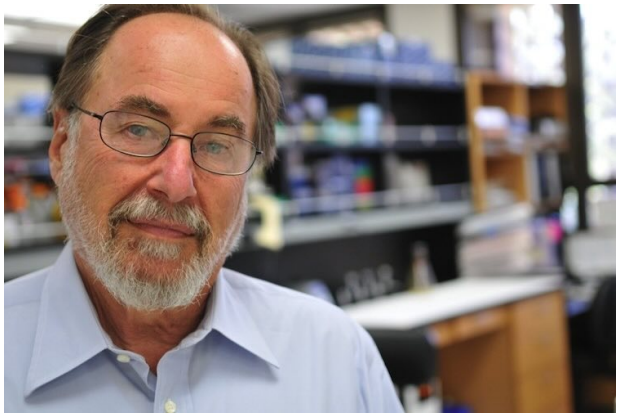

Congratulations to Dr. Rebecca Plessel, a graduate student in the Mohr/Wilson group, who successfully defended her thesis on October 8th! We wish Becca all the best in her new chapter.

Thesis Title: "METTL16 Modulates Immune Signaling and Extracellular Matrix Gene Expression in Primary Human Fibroblasts."

Training Program: Molecular Oncology and Tumor Immunology

A Personal Tribute to David Baltimore

By Ned Landau, PhD

There were two celebrations in memory of David Baltimore; one at Caltech in November, and one at MIT in December. I had the good fortune to attend both beautiful tributes to David's career and life. The West Coast and East Coast events were led by different sets of speakers and were attended by non-overlapping sets of former trainees and colleagues. Both memorials highlighted the impact that David made as a scientist, an institutional leader as president of Rockefeller and Caltech, a policy advisor and mentor to young scientists, as well as his passion for his love of the great outdoors and the arts. For me, the memorials were a chance to reflect on my time as a member of the Baltimore lab. I learned so much from David, from being in his lab, and from the friends I made there. I found the memorials inspiring, not only for

the prestige of the speakers—the current presidents of MIT and Caltech, fellow Nobel laureates, and prominent leaders in biotech and law—but also for the many former trainees in attendance, now leaders and pioneers in their own right, who credited their success to David's early recognition of their talent and his continued support throughout their careers. Displayed at both memorials was the Baltimore lab family tree, a drawing with branches lined with leaves, each signed by a former lab member and arranged chronologically to reflect their time in the lab. It stands as a wonderful tribute to the number of lives that he touched.

One of David's last public presentations was a virtual lecture at the May 2025 Cold Spring Harbor Retrovirus Meeting, where he so eloquently recounted his discovery of reverse transcriptase. Holding up the original handwritten page from his lab notebook, he remarked how the experiment had taken just two weeks, but it had changed the world. The impact of his discovery is undeniable. Reverse transcriptase allowed the cloning of mammalian genes; a breakthrough that gave rise to the biotech industry, permitted numerous advances in basic research, and ultimately earned him a Nobel prize at the age of 37. The loss of David is a loss to us all. A scientist of rare clarity and integrity, he helped guide the field through the AIDS crisis and the COVID-19 pandemic, he played a major role in shaping national science policy at the NIH, and he served as a leading voice in molding the ethics of recombinant DNA research, stem cell therapy and gene editing. Although the field will now have to find its own way without David's guidance, the lessons he taught us will continue to lead us through the challenges ahead.

To learn more about David and his influence check-out these links:

Remembering

Dr. William H. Foege (1936-2026)

William "Bill" Foege was a physician and epidemiologist widely credited with leading the strategy that eradicated smallpox—one of the greatest human achievements of the 20th century. Dr Foege (pronounced *FAY-gy*) served as Director of the CDC from 1977-1983 under Presidents Carter and Reagan, and later became an influential leader at The Carter Center and the Task Force for Global Health. In 2012, President Obama awarded him with the country's highest civilian honor, the Presidential Medal of Freedom. He joined the faculty at Emory University in 1997 and served as Presidential Distinguished Professor Emeritus of International Health at the university's Rollins School of Public Health until his

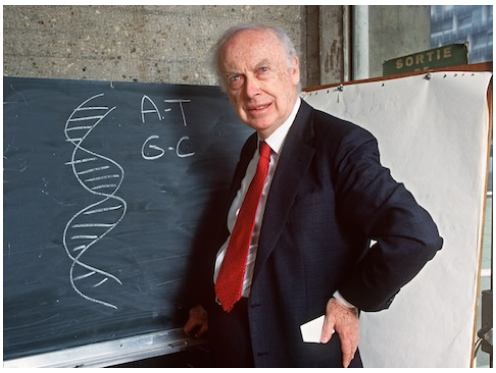

passing.

Read more about Dr Foege's legacy:

- Remembering William Foege (Emory University)
- Public health giant William Foege, who helped eradicate smallpox, has died at 89. (STAT News)
- In memoriam Dr William H Foege (1936-2026) (World Health Organization)

Dr. James D. Watson (1928-2025)

Biologist James Watson was best known for his contributions to the discovery that the molecule of DNA forms a double helix. He shared the 1953 Nobel Prize in Physiology or Medicine with Maurice Wilkins and Francis Crick "for their discoveries concerning the molecular structure of nucleic acids and its significance for information transfer in living material." This work relied on crucial X-ray diffraction data generated by Rosalind Franklin and her graduate student, Raymond Gosling. Later in his career, Watson became widely criticized for repeatedly making racist and sexist statements presented as scientific claims, remarks that were broadly rejected by the scientific community and led to his professional marginalization.

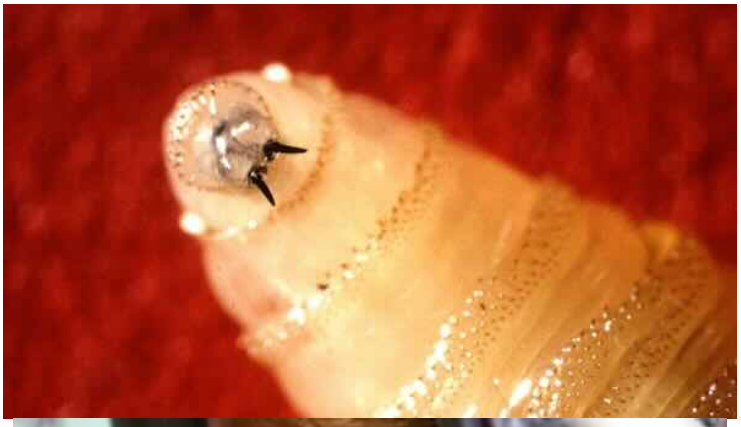

Read the obituaries:

- James Watson: Controversial discoverer of 'the secret of life' (BBC)
- James Watson obituary: co-discoverer of DNA's double helix who reshaped modern biology. (Nature)

Just for Fun! 😄

Newsworthy Microbiology

'Devastating' Flesh-Eating Parasite Is Spreading Toward The US, CDC Warns.

An outbreak of the flesh-eating New World screwworm (Cochliomyia hominivorax) has killed seven people and infected at least 1,190 more across Mexico and South America, and now the US Centers for Disease Control (CDC) and Prevention is alerting health workers of its northward spread.

CDC Health Advisory

Emerging bat virus found in stored throat swabs from 5 patients with suspected Nipah virus infection.

Bangladeshi researchers have uncovered an emerging bat-borne virus in archived throat swabs and viral cultures from five patients initially thought to be infected with Nipah virus (NiV).

The discovery of Pteropine orthoreovirus (PRV), which raises the concern that dangerous bat viruses may be silently co-circulating with NiV, prompted the authors to recommend the consideration of PRV in the diagnosis of patients with NiV-like illness.

ASM: Agar Art 2025 Winners Showcase How Microbes Sustain Life

The American Society for Microbiology (ASM) has announced the winners of the 11th annual Agar Art Contest, which received a record-breaking 557 submissions from around the world. Since 2015, ASM's Agar Art Contest has provided a platform for scientists and artists to showcase their creativity by using live microbes to "paint" images on agar—a gelatin-like medium used to grow microorganisms. This year's contest theme, "Microbes Make the World Go Round," invited participants to highlight the essential role microbes play in our daily lives, from supporting ecosystems to enabling key innovations in health and industry.

NYAS: Shaping Science Podcast

Dive into topics at the forefront of scientific discovery from experts and other members of the Academy community.

The New York Academy of Sciences produces the "Shaping Science" podcast, where they talk with experts from science, academia, industry, and beyond to explore the latest in research, education and innovation for the public good. You'll hear directly from many of today's pioneering minds and will gain valuable insights and perspectives into what's fueling the most urgent scientific debates of our time. In this era of short attention spans, their freewheeling, no holds barred interview format enables us to go deep – without sacrificing nuance or complexity. Episodes are released on a bi-monthly basis and can be streamed on Spotify or Apple Podcasts.

AAAS: 2025 Golden Goose Awards

The Golden Goose Award celebrates science that has returned significant yet unexpected benefits to society. The award tells the stories behind the research to show the public and congressional leaders the tangible outcomes behind the federal research dollars spent. Watch this short documentary to learn more.

Congratulations to the 2025 Awardees:

"Nature has all the answers": How a knack for nature's oddities improved disease diagnostics and inspired scores of scientists.

Awardee: Joseph G. Gall

Joseph G. Gall, often called the father of modern cell biology, used his deep knowledge of nature's "oddball" organisms to make fundamental discoveries about chromosomes, including co-developing in situ hybridization—a technique that transformed gene visualization and became essential for disease diagnostics.

Cisplatin breakthrough redefines testicular cancer treatment

Awardees: Barnett Rosenberg, Loretta VanCamp, Thomas Krigas

The awardees uncovered cisplatin through a serendipitous basic-science experiment showing that platinum compounds, not electric fields, halted cell division in bacteria. Their unconventional discovery led to a platinum-based chemotherapy approved in 1978, cisplatin, that has transformed cancer care, most dramatically boosting testicular cancer survival from ~10% to over 90%, and remains a cornerstone of modern oncology.

Cheers to the New Year!

[www.ihearteating.com/jack-o-lantern-stuffed-peppers/]

IN CONCLUSION

Tasting notes: sharp, herbaceous, botanical, crisp

This recipe is a sparkling version of the vintage Last Word cocktail. It's every bit as sharp, tart, and herbaceous as the original, but with more refreshing acidity and peppy effervescence. The addition of sparkling wine opens up each flavor and gives it room to breathe, which is why I consider it to be more like a concluding paragraph than a final word.

YIELD: 1 COCKTAIL

- ½ ounce gin
- ½ ounce green Chartreuse
- ½ ounce maraschino liqueur (such as Luxardo)
- ½ ounce fresh, strained lime juice
- Chilled champagne, to top
- Optional: herb sprig or maraschino cherry, to garnish

(1) Combine the gin, Chartreuse, liqueur, and lime juice in a cocktail shaker filled with ice. Shake hard for 15 seconds, then strain into a chilled champagne glass.

(2) Top with chilled champagne, by pouring carefully and slowly down the side of the glass to reduce foam.

Optional: garnish with an herb sprig (such as rosemary) or a skewered maraschino cherry.

***Note:** If you garnish with an herb sprig, flatter herbs like the kinome leaf pictured here can be affixed to the side of the glass with edible glue and a small paintbrush,*
