The Microscope

Quarterly Newsletter highlighting the Department of Microbiology at NYU Langone

June 2026

HCMV-infected human dermal fibroblasts at 72 hours post-infection, with nuclei in blue, eIF3d in green, viral UL99 mRNA in magenta, and the viral assembly compartment in red as defined by GM130. Submitted by Adam Silhavy (Mohr/Wilson group).

Summer is Here!

We've made it to summer...when the days are longer, the coffee is iced, and everyone is pretending not to count down to vacation.

Share an Update

Submit an Image

In this edition of **The Microscope**, we are featuring imagery from the Mohr/Wilson group. The image above was submitted by Adam Silhavy, a 3rd year graduate student in the lab. This image shows HCMV-infected normal human dermal fibroblasts (NHDF) after 72 hours of infection. The cell nucleus is denoted in blue, the eIF3d translation factor in green, the viral mRNA UL99 in magenta, and the viral assembly compartment as determined by the cis-Golgi matrix protein (GM130) signal in red. This image was captured by Adam on the Holt lab's Nikon spinning disk confocal microscope.

If you'd like to showcase the real science happening in your lab in a future issue of The Microscope, don't wait to be asked. Click "Share an Update" or "Submit an Image" anytime to share your news and your images with us.

Here's to a relaxing, yet still productive summer!

A Note from the Chair

Summer has arrived in New York with a reminder that even the longest narratives can change in an instant. I am not someone who generally follows sports closely, but it was hard not to get caught up in the city's excitement as the Knicks brought home an NBA championship more than 50 years in the making. While science rarely comes with that kind of fanfare, I do think it often follows a similar emotional logic. A project can move from exciting to discouraging, and sometimes back again, based on a single experiment, reviewer comment, or result that suddenly reframes the entire story. For me, that volatility is one of the hardest parts of academic life,but it is also why remaining engaged, constructive, and optimistic matters. The recent $500 million gift from the Druckenmillers to the school—an extraordinary vote of confidence in the future of this institution and in the people whose work will define it—is a remarkable example of how trajectories can change.

At the departmental level, this lesson is less about any single dramatic turn and more about the steady accumulation of shared effort. Our work is difficult, nonlinear, and often unpredictable, but it is made better by those around us: the colleague who asks a useful question, the trainee who pushes a project forward, the presenter who changes our perspective, and the conversation that takes an unexpected direction.

So, when things are going well, I hope we can remember to notice the small wins: the experiment that finally works, the student who finds their footing, the paper that gains momentum, the conversation that inspires. These moments are easy to rush past, but they are often what sustain us. And when things are not going well, as inevitably happens in science and in life, I hope there is some comfort in remembering that a difficult stretch does not have to define the entire story. Trajectories can change quickly, sometimes when we least expect it. Until they do, this department should be a place where we all feel supported, valued, and connected. That is the community we are trying to build, and one I am grateful to be part of.

Upcoming Seminars

RECURRING MEETINGS

Departmental Seminar Series

Fridays at 11:30 AM
Science Building
Room 103

MARK YOUR CALENDARS:
Starting in September, Departmental Seminars will be moving to Wednesdays at 12:30pm in the new 4th Floor Conference Room.

Departmental Seminar Series Calendar

Virology Consortium Meeting

10:30 AM - 11:30 AM
Every other Tuesday
ACLS West 5th Floor
Conference Room 508

Virology Consortium Meeting Schedule

UPCOMING THESIS DEFENSE

Joaquin Rodriguez Galvan

Dittmann Lab
July 15th, 1pm
SB 103

The role of Serine Protease Inhibitors (SERPINs) In Human Respiratory Virus Infections – a comparative virology approach.

Department Updates

New Initiatives

Micro Department Sharepoint is coming soon...

After continued discussion with MCIT, we have decided to build the proposed Departmental Wiki as a SharePoint Teams Site instead. This platform will give us greater flexibility to organize and share department-wide resources, including announcements, policies, forms, shared documents, links, and other reference materials in a more structured and accessible format. Our service request for the new site is currently in progress, and we hope to have another update for you soon.

Equipment and Facilities

Update on the iBright Imager

Please continue to use the instrument as you have been, but be sure to export your data before the last Friday of the month. We will be wiping any data on it then to ensure the instrument performance.

Shared Equipment on the 4th Floor

Below is a list of the Department's new shared equipment that is housed on the 4th floor.

Equipment	Location	Contact

Eppendorf Innova S44i stackable incubator	Room 461	Fatoumatta Dibba, Daisy Duan
Bio-Rad QX700 E Droplet Digital PCR system	Room 461	Sydney Pimentel
Beckman Coulter Optima Max-XP tabletop ultracentrifuge	Lab 460 Bay A	Fatoumatta Dibba, Daisy Duan
Cytiva ÄKTA Pure 25 L FPLC	Room 461	Fatoumatta Dibba, Daisy Duan
Hettich Zentrimix dual-axis centrifuge	Room 431	Maryline Panis
Shimadzu Fluorescence HPLC	Freezer Room 461	Fatoumatta Dibba, Daisy Duan
Kuhner triple-stack shaker/incubator for mammlian and insect cultures	TC Room 458	Fatoumatta Dibba, Daisy Duan
Vi-CELL BLU cell viability analyzer	Room 431	Payal Damani-Yokota, Leigh Miller
Bio-Rad MicroPulser Electroporator	Room 460	Maryline Panis, Sydney Pimentel

Outreach Poll

Would you be interested in participating in or hosting outreach activities with the Department of Microbiology?

We are exploring an opportunity to engage with local high school students through activities that would allow them to meet researchers in our department, tour labs, and participate in hands-on demonstrations, and explore career options in science.

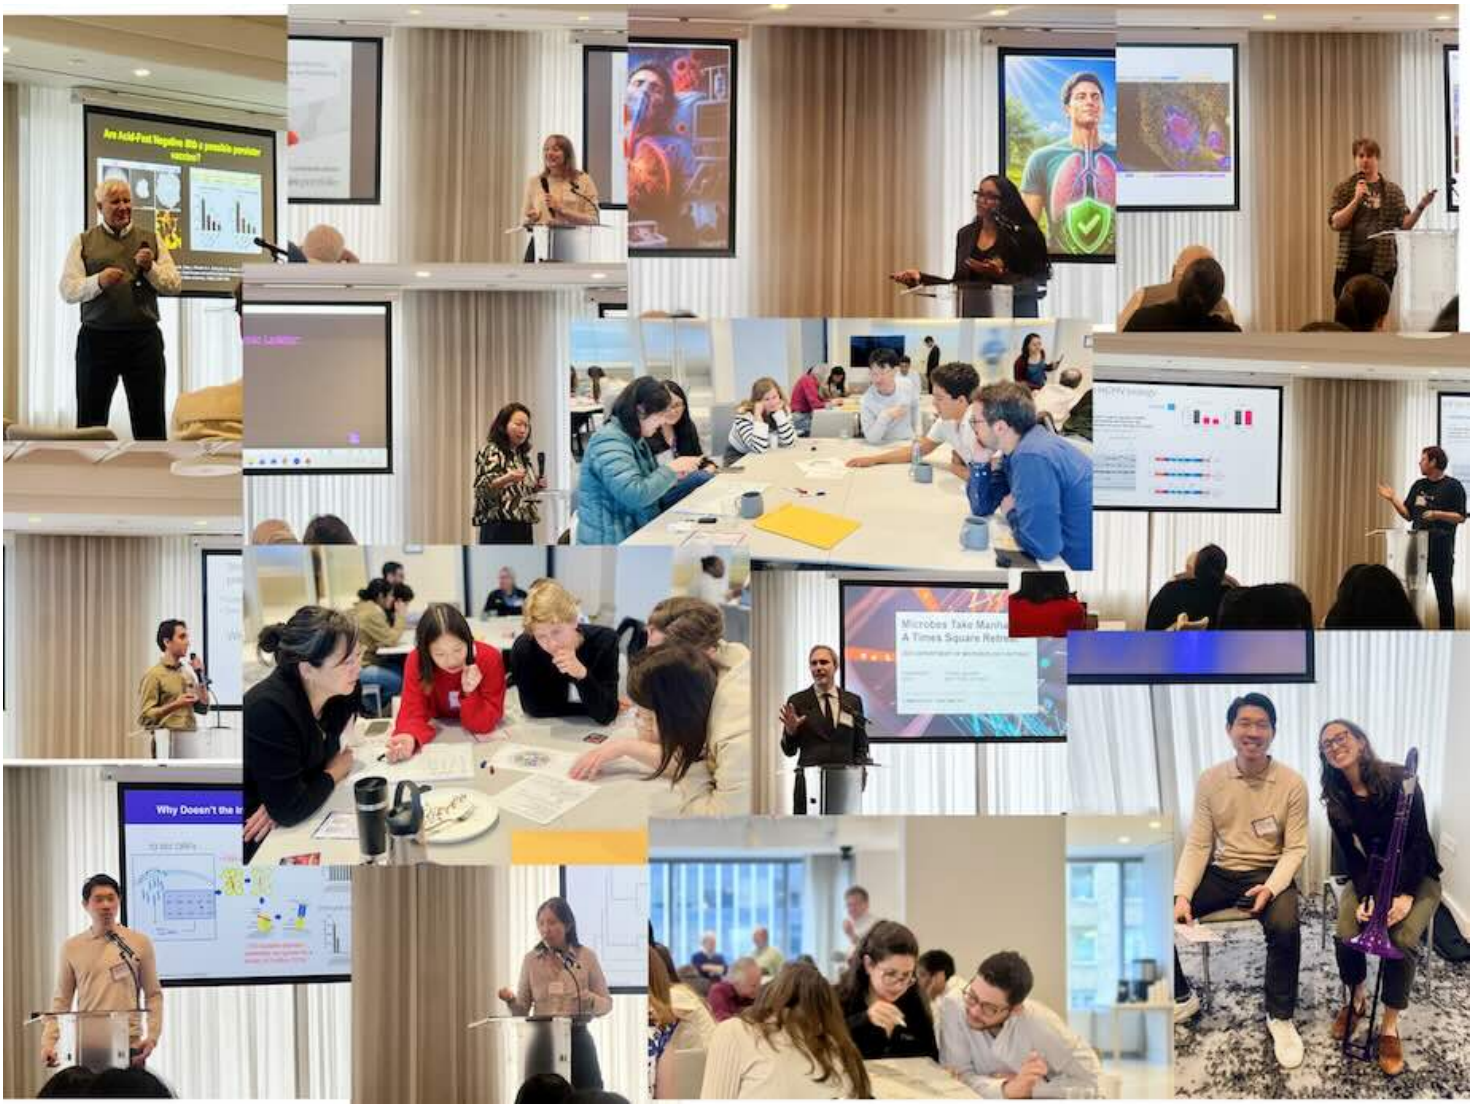

If you are interested in being involved, please click the button to share your reponse.

Yes! Count me in!

Microbes take Manhattan!

The 2nd Annual Department of Microbiology Retreat, **"Microbes Take Manhattan: A Times Square Retreat,"** took place on Wednesday, May 6th at 3 Times Square. The full-day event brought the department together for a lively mix of science, career development, and community building, including a keynote lecture by William R. Jacobs Jr., PhD, trainee short talks, expert insights on publishing and academic career paths, faculty flash talks, and interactive activities such as the Codon Codex Challenge and Micro Madness trivia. The day concluded with closing remarks, prizes, and a wine and beer reception.

Special thanks to the entire organizing committee for planning such a fun and engaging retreat!

PI News

Ian Mohr, PhD

Angus C. Wilson, PhD

Congratulations to Ian Mohr, Angus Wilson, and members of the Mohr/Wilson group on being featured for their exciting new work in *Molecular Cell*. Together with colleagues in the Dept of Biochemistry and Molecular Pharmacology at NYU, the team showed that HSV-1 uses the viral protein ICP4 to make the normally dense interior of the host cell nucleus more fluid-like, enabling viral condensate formation and more efficient replication. Their study not only highlights a clever viral strategy, but also how virus–host interactions can reveal fundamental principles of nuclear organization, chromatin dynamics, and cell biology.

Original Article:
Herzog NL, Shu T, Kidiyoor GR, Keegan S, Korchi F, Chenoweth DM,

Zhang H, Mohr I, Wilson AC, Holt LJ. Herpes simplex virus 1 fluidizes the nucleus, enabling condensate formation. Mol Cell. 2026 Mar 5;86(5):817-833.e7. doi: 10.1016/j.molcel.2026.02.005. PMID: 41795434.

In the News:

- https://nyulangone.org/news/herpes-virus-fluidizes-cell-nuclei-multiply-faster
- https://www.genengnews.com/topics/infectious-diseases/hsv-1-liquifies-cell-nuclei-to-aid-replication/

Kamal Khanna, PhD

Kamal Khanna will present recent work from the Khanna lab at the 21st International Conference on Innate Immunity, held May 22–27, 2026, in Sissi, Crete, Greece. His talk will highlight the lab's work on trained immunity in macrophages and how prior immune exposures can shape future innate immune responses.

Robert Schneider, PhD

Congratulations to Robert Schneider, who has been awarded a five-year R01 grant from the National Cancer Institute. The grant, titled "The m6A and non-canonical mRNA translation initiation axis in breast cancer metastasis" (1R01CA314059-01), begins June 1, 2026, and will support research into how RNA modification and non-canonical translation mechanisms drive breast cancer metastasis.

Research Technician Opportunity - Please Share with Your Networks

The Schneider lab is seeking a Research Technician to join its team and welcomes referrals from broader professional networks. We are also open to discussing a shared technician arrangement with another lab or team, should that be a good fit for both groups. Please help by sharing this opportunity with qualified candidates outside the Department who may be interested.

Email inquiries or CVs can be sent to Dr. Schneider at Robert.Schneider@nyulangone.org.

Job Responsibilities and required research skills:

Working under the direction of postdoctoral fellows:

- Carry out research using molecular biology techniques that include: protein gel electrophoresis, immunoblot analysis, PCR, qRT-PCR, basic gene cloning and sub-cloning techniques.
- Tissue culture studies that include: maintaining and passaging primary cells, cancer cell lines, transfection of cells, use of lentivirus and adeno associated virus vectors.
- Animal studies: experience working with mice, maintenance of colonies, breeding, bioluminescence quantification, drug delivery by oral gavage, i.p. injection, post-mortam tissue harvesting
- Some experience with facilitated activated cell sorting (FACS) and flow cytometry is a plus.

Minimum Qualifications:
To qualify you should have a BA or BS Degree in Life Sciences or a related field with several years of experience. Effective oral and written communication skills required.

Trainee News

Congratulations to our Newest PhDs!

Grace Ciabattoni, PhD

Ortigoza lab
April 13th

Elucidating Determinants of SARS-CoV-2 Transmission

Teniola Idowu, PhD

Weiser lab
April 24th

Immune Pathways That Prevent Persistent Pneumococcal Colonization

Christina Higgins, PhD

Molly Sharp, PhD

Characterizing Two Potential Group B Streptococcus Vaccine Challenges: Capsule Switching and Capsule Shedding

Stacey Bartlett, PhD

Bailey Bozarth

Stacey Bartlett (postdoc) and Bailey Bozarth (PhD candidate) from the Ortigoza lab presented posters at the Department of Medicine Research Day this past May. The event celebrates new advances in biomedical research and reinforces longstanding traditions in the Department of Medicine, which was built on the principles of care, support for diversity of thought, and dedication to the process of discovery.

Eduardo Bernier

Payal Damani-Yokota, PhD

Payal Damani-Yokota (postdoc) and Eduardo Bernier (research assistant) from the Khanna Lab, were selected to give talks at The American Association of Immunologists (AAI) annual meeting, IMMUNOLOGY2026 in Boston this April. They both also received travel awards to attend this conference.

Payal's podium talk: "Helminth trained nerve and airway associated interstitial macrophages are indispensable for mitigating pathology during respiratory viral infection".

Dr. Khanna gave Eduardo's podium talk: "A cross-species nerve- and airway-associated macrophage program that drives lung tumor progression and immunotherapy resistance".

Additional News for Payal Damani-Yokota, PhD:

Payal received a travel grant from the European Federation of Immunological Society and European Journal of Immunology (EFIS/EJI) for a Gordon Conference on Immune Circuitry and Molecular Pathways in Tissue Homeostasis, Infection, and Disease that will take place in Barcelona, Spain on June 28-July 3.

Grace Ciabattoni, PhD

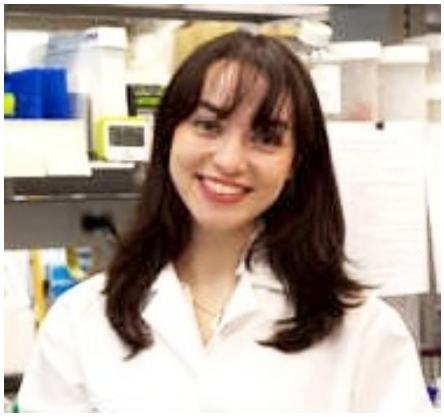

Grace Ciabattoni, a newly hooded PhD from the Ortigoza lab (congrats again!), presented a poster of her work at the CEIRR Annual Network Meeting in Boston.

Daniel Fecko

Daniel Fecko, a research associate in the Weiser lab, presented a poster titled "Bacterial and host factors affecting acquisition of *Streptococcus pneumoniae* in a murine model" at ASM Microbe 2026 in Washington D.C.

Mimi Kostoska

Mimi Kostoska, a PhD candidate in the Khanna Lab, gave a talk at a myeloid cell-focused Keystone meeting, presenting her ongoing work on CD169+ Macrophages in the spleen: "Splenic Sentinels: Marginal Zone Macrophages Restrain Staphylococcus Aureus Virulence and Enable Effective Neutrophil Mediated Clearance".

She was also a recipient of a Keystone Scholarship Award for this meeting.

Adam Silhavy

Adam Silhavy, a PhD candidate in the Mohr/Wilson group, will be presenting a poster at an EMBO workshop focused on RNA localization and local translation that will be held in Povoa de Varzim, Portugal at the end of June.

Alumni News

Varshini Vimal

Varshini Vimal, a former undergraduate student in the Khanna lab, will be starting medical school at Rowan University in the Fall.

Personal Milestones

Vinica Dhar (Khanna lab) got married to Anish Mondal on February, 7th 2026 in Jammu, India. When asked her favorite memory from the day, she replied, "I can't pick a single thing. The whole day was memorable!"

Leigh Miller (Khanna lab) married Brandon Sprague this past October. Leigh says, "One of my favorite things about our wedding was that we actually had two wedding ceremonies, so I had two wedding dresses! Our first ceremony was at St. Mary's Church in the French Quarter on October 23rd with just family and very close friends, and our main wedding ceremony was in New Orleans at the Tea Room in the Audubon Zoo and it was October 25th."

Congratulations and much happiness to the newlyweds!

Publications & Presentations

Conferences

International Herpesvirus Workshop

July 11 - 15, 2026: Montreal, CA
The 50th International Herpesvirus Workshop will take place at the Centre Mont-Royal, a modern conference venue located in the heart of downtown Montreal. Sessions will cover all aspects of herpesvirus research, from molecular biology, latency, immunity, and pathogenesis, to clinical and translational advances in prevention and therapy.

GRC 2026: Microbial Toxins

Rocky Mountain Virology Conference (RMVC)

September 25 - 27, 2026: Pingree Park, CO
The RMVC is held each fall. This year's meeting will be held at the Colorado State University Mountain Campus in Pingree Park, CO.

IUMS Biennial Congress 2026

November 4 - 6, 2026: Lisbon, Portugal
The International Union of Microbiological Societies (IUMS) Biennial Congress unites all the main three disciplines of microbiology—

and Pathogenicity

July 12 - 17, 2026: Waterville Valley, NH
The 2026 Gordon Research Conference (GRC) on Microbial Toxins and Pathogenicity and its companion Gordon Research Seminar (GRS) will feature research on the fundamental mechanisms of host-microbe/toxin interactions and bacterial pathogenesis.

Invited Keynote Speaker: Heran Darwin

ASV 2026

July 27 - 30, 2026: Minneapolis, MN
45th annual meeting of the American Society for Virology, hosted by the University of Minnesota in Minneapolis, MN.

Travel Award Deadline: February 9th

Bacteriology and Applied Microbiology, Virology, and Mycology and Eukaryotic Microbiology—in one place. The 2026 Meeting will focus on "Beyond the Microscope: AI & Innovation in Microbiology."

Abstract Submission Deadline: April 29th

ASTMH 2026

November 18 - 22, 2026: National Harbor, MD
The American Society of Tropical Medicine and Hygiene (ASTMH) annual meeting will be held at the Gaylord National Harbor, MD (adjacent to Washington, DC).

Symposia Submission Deadline: March 4th
Abstract Submission Deadline: April 1st

Go Viral at ASV 2026: Submit Your Virology-Inspired Art

Attending ASV 2026?

The local hosts at the University of Minnesota have launched **Viral Art**, a new initiative celebrating the creativity of the virology community.

Attendees are invited to submit one piece of original virology-inspired artwork— painting, drawing, photography, sculpture, mixed media, or original digital art. (AI-generated images not permitted)

All pieces submitted will be showcased throughout the ASV 2026 experience, including on the ASV website, ASV social media channels, and within the ASV 2026 Annual Meeting mobile app.

The submission deadline is **July 17, 2026, at 11:59 PM ET**.

Link to submit.

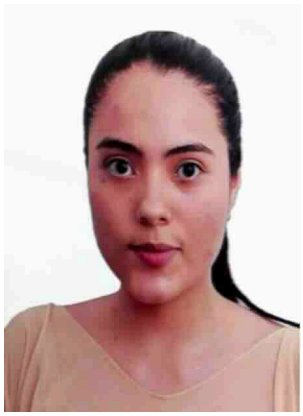

New Faces

Daisy Duan

Daisy Duan is a new postdoc in the Lee lab. She earned her PhD in Molecular Biophysics and Biochemistry from Yale, where she studied regulation of microtubule dynamics in Tony Koleske's lab. In the Lee Lab, she will investigate how membrane-resident E3 ubiquitin ligases confer substrate selectivity in health and disease using cryoEM, TIRF, and proximity labeling mass spectrometry.

Yuranis García del Castillo, M. Sc

Yuranis, a tropical microbiologist from Monteria, Colombia, has been working in the Rodriguez lab as a Research Associate since last fall. She will study how immune responses contribute to disease pathology in patients with long COVID.

Matthew Knott

The Khanna lab is excited to welcome their new Masters Student, Matt Knott. Matt will be learning about macrophages in the lung and working several different projects in the lab with Dr. Payal Damani-Yokota.

Kathleen Leever

Kat Leever is a first year masters student in the Mohr/Wilson group. She received her undergraduate degree in Genetics and Genomics from UT Austin, where her research focused on the epitranscriptomic roots of coral disease and hydrocarbon cycling genes in archaea. She is currently researching m6Am in the context of viral infections. Outside the lab, Kat enjoys playing tennis and reading.

Isabel Tadmiri

Isabel Tadmiri is an incoming public health master's student who will join the Khanna lab Khanna lab this fall. She was recently selected as one of five 2026 "Epi Scholars" by the NYC Department of Health and Mental Hygiene, a distinction recognizing outstanding epidemiology graduate students from across the country.

Fond Farewells

Eduardo Bernier

Eduardo Bernier, a research assistant in the Khanna lab, will leave the lab to begin his MD/PhD program at the University of Chicago this fall.

Isabella Diaz Alba, MHS

Isabella Diaz Alba, an Assistant Research Scientist in the Schneider lab, has been accepted to St. George's University School of Medicine in Grenada. She has received several merit scholarships to attend.

Kelly Crotty, PhD

Kelly Crotty has departed the Rodriguez lab to begin a postdoctoral position at the University of Osaka in Japan. Kelly defended her thesis in April 2025 and then remained in the lab for additional postdoctoral training before starting this new role.

Daniel Fecko

Daniel Fecko, a Research Associate in the Weiser lab, will be moving to the Ross Levine Lab at Memorial Sloan Kettering Cancer Center at the beginning of July to work on blood cancers for one year before medical school.

Teniola Idowu, PhD

Teniola Idowu, a newly hooded PhD in the Weiser lab (congrats again!), will be moving on at the end of June to start a two-year Clinical Microbiology Fellowship at Memorial Sloan Kettering Cancer Center.

Olga Katsura, PhD

Olga Katsara, a postdoc in the Schneider lab, has accepted a tenure-track Assistant Professor position at the Institute for Cancer Research Montpellier, INSERM, the University of Montpellier, beginning in July.

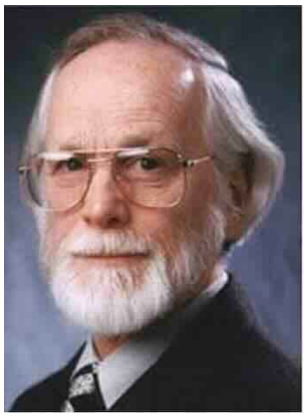

Junsung Kimura

Junsung, an undergraduate student in the Khanna lab, has graduated NYU with a double major in Mathematics and Chemistry, and will be leaving the lab.

Remembering

J. Michael Bishop, MD (1936-2026)

Dr. J. Michael Bishop, a pioneering scientist in virology and cancer biology, died on March 20, 2026, at the age of 90. Together with Harold Varmus, Dr. Bishop received the 1989 Nobel Prize in Physiology or Medicine for the discovery that oncogenes originate from normal cellular genes, a finding that transformed the understanding of cancer and its genetic basis. Much of his career was spent at the University of California, San Francisco, where his work in retrovirology and molecular oncology helped lay the foundation for modern cancer research and targeted therapies. He also served as Chancellor of UCSF and was widely recognized as a mentor, educator, and advocate for biomedical research.

Read more about Dr. Bishop:

- Biography from his Nobel Prize page

Barry R. Bloom, PhD (1937-2026)

Barry R. Bloom, former dean and professor emeritus at the Harvard T.H. Chan School of Public Health, died at the age of 88 following a long battle with cancer. A former AAI president and Distinguished Fellow, Dr. Bloom was renowned for his research on immune responses to infectious diseases including tuberculosis, leprosy, malaria, and COVID-19. His laboratory made foundational contributions to cellular immunology, including early work showing that lymphocytes—not macrophages—mediate antigen specificity and identifying migration inhibitory factor, one of the first lymphokines and non-antibody products of lymphocytes described in the literature. His studies of leprosy and tuberculosis helped

define mechanisms of cell-mediated immunity, macrophage antimicrobial activity, host defense against intracellular pathogens, and the development of new tuberculosis vaccine candidates.

Read more about Dr. Bloom:

- AAI Oral History Project's interview with Dr. Barry Bloom

Nancy Jane Cox, PhD (1948-2026)

Nancy Cox, PhD, a virologist and longtime leader in influenza research, died on April 24, 2026, at the age of 77 from glioblastoma. During 37 years at the CDC, she helped shape national and global approaches to influenza surveillance, vaccine strain selection, and pandemic preparedness. She served as director of the CDC's Influenza Division from 2006 to 2014 and directed the WHO Collaborating Center for Surveillance, Epidemiology and Control of Influenza at the CDC from 1992 to 2014. Her work strengthened systems for tracking influenza virus evolution, identifying emerging strains with pandemic potential, and integrating modern virologic technologies into public health response. Cox retired in December 2014 with 278 publications and numerous honors, including CDC's Lifetime Achievement Award, the Service to America Award, U.S. Government Federal Employee of the Year, and recognition on *Time* magazine's list of the 100 people shaping the world

Just for Fun! 😄

Newsworthy Microbiology

'Predators that just run in and grab, stab and kill': The deep cave bacteria resistant to modern medicine. (BBC)

The article highlights research from Lechuguilla Cave in New Mexico, where scientists found bacteria that had been isolated from human activity for millions of years yet were resistant to many modern antibiotics. One strain, Paenibacillus sp. LC231, resisted 26 of 40 antibiotics tested, including daptomycin, a last-resort

Rare rock-eating bacteria help shape the speleothems of Lechuguilla Cave. (Credit: Alamy)

drug used against resistant Gram-positive infections. The key takeaway is that antimicrobial resistance is not simply a modern consequence of antibiotic overuse; many resistance mechanisms are ancient, naturally evolved tools in microbial competition.

Ancient pathogen genomics reshapes our understanding of infectious disease ecology and human-pathogen evolution. (gorodenkoff / iStock)

Ancient DNA reveals a plague outbreak in Siberia 5,500 years ago—4,000 years before the Justinian Plague. (CIDRAP)

New evidence from ancient DNA shows that *Yersinia pestis* caused plague outbreaks among hunter-gatherer communities near Lake Baikal in Siberia roughly 4,000 years before the Justinian Plague. Researchers detected plague DNA in tooth samples from children and adolescents, buried at several sites, including Ust'-Ida, where at least 18 of 46 young individuals tested positive for *Y. pestis*. The findings suggest that early plague strains were highly virulent and may have spread through marmot-associated zoonotic spillover long before dense agricultural settlements emerged.

150 Years of the U.S. Postdoc

The National Postdoctoral Association (NPA) is celebrating the 150th anniversary of the U.S. postdoctoral position with a year-long initiative honoring its 1876 origins at Johns Hopkins University. The celebration will culminate during the 17th Annual National Postdoc Appreciation Week, September 21–25, 2026.

Founded in 2003, the NPA envisions an inclusive community where all postdocs are empowered, valued, recognized, and supported in their current and future endeavors. The NPA serves the entire postdoctoral community, including its 24,000 individual and 250 organizational members.

Learn more about this year's theme through The 150 Year History of the Postdoc, a visual timeline highlighting key moments in the evolution of the postdoctoral position.

Helpful Tools for your Research

Browzine

BrowZine is a powerful tool that brings your favorite scholarly journals together into a single, easy-to-use digital bookshelf. Instead of jumping between multiple publisher websites, you can organize and follow your favorite academic journals across various subjects in one digital bookshelves. Custom alerts will notify you the moment a new issue drops, and seamless integration allows you to save articles for offline reading or export them directly to your preferred citation manager.

Key Features

- **Personal Bookshelf:** Organize and follow your favorite academic journals across various subjects.
- **New Issue Alerts:** Receive notifications and easily view the tables of contents as new issues are published.
- **Offline Reading:** Download and save articles to your device to read offline.
- **Citation Integration:** Export references and sync saved articles directly to citation management tools like Zotero, Mendeley, and EndNote.

To get started, visit BrowZine online or download the mobile app, select "Choose My Library, search for the NYU Health Sciences Library, and log in to unlock access to the entire subscription catalog!

Lab Hacks Worth a Look

Looking for small ways to make life in the lab a little easier? Check out this collection of real lab hacks from researchers, compiled by Katharine Martin at GoldBio. Some may be immediately useful, others may be more creative than practical, but all of them offer a fun reminder that a little ingenuity can go a long way at the bench.
